A Spark may cost a Farm

shingles

Bird's-eye view—Good Hold Farm, Mentor, Ohio. Property of Mr. L. E. Holden. The estate covers 1,200 acres. Nearly every building is covered with Ambler Asbestos Shingles (Century Brand)

A Spark May Ruin a Farm

ONE spark on the roof—a light wind—just brisk enough to fan the leaves on the trees—may bring your home down in ruins about you while you sleep.

That is the story that has been repeated thousands upon thousands of times on the American farm. Farm fires have become so common that the newspapers don't find the stories interesting enough to print and people do nothing more than look at the ashes and pass on.

But to you—the loss of your home is a crushing blow. It means the work of a lifetime sacrificed to *a spark*. Loved ones homeless. Things and surroundings—prized possessions that insurance money cannot buy—all this—wiped out in a few minutes by a spark—a *single spark*.

Perhaps the spark came from your own chimney—a brush fire far from the house or barns—sparks from a neighboring fire—a passing locomotive—or spontaneous combustion. It can happen to you anytime.

And if you do not think sparks carry long distances just build a brush fire some breezy night—and watch the sparks fly. They sail out on the wind like dried leaves—and as far.

The city of Salem, Massachusetts, was all but wiped out by a fire that started in ONE little building. The night was a windy one. The sparks were caught in little gusts and whirled out in every direction. They settled upon hundreds of wood shingle roofs. A few hours later 15,000 souls were homeless—everything lost and one of New England's historic cities stood in naked black ruins.

At Columbus, Georgia, a short while back—sparks from a cotton compress started fires on 29 roofs at the same time—but unusually fine fighting equipment soon had it under control.

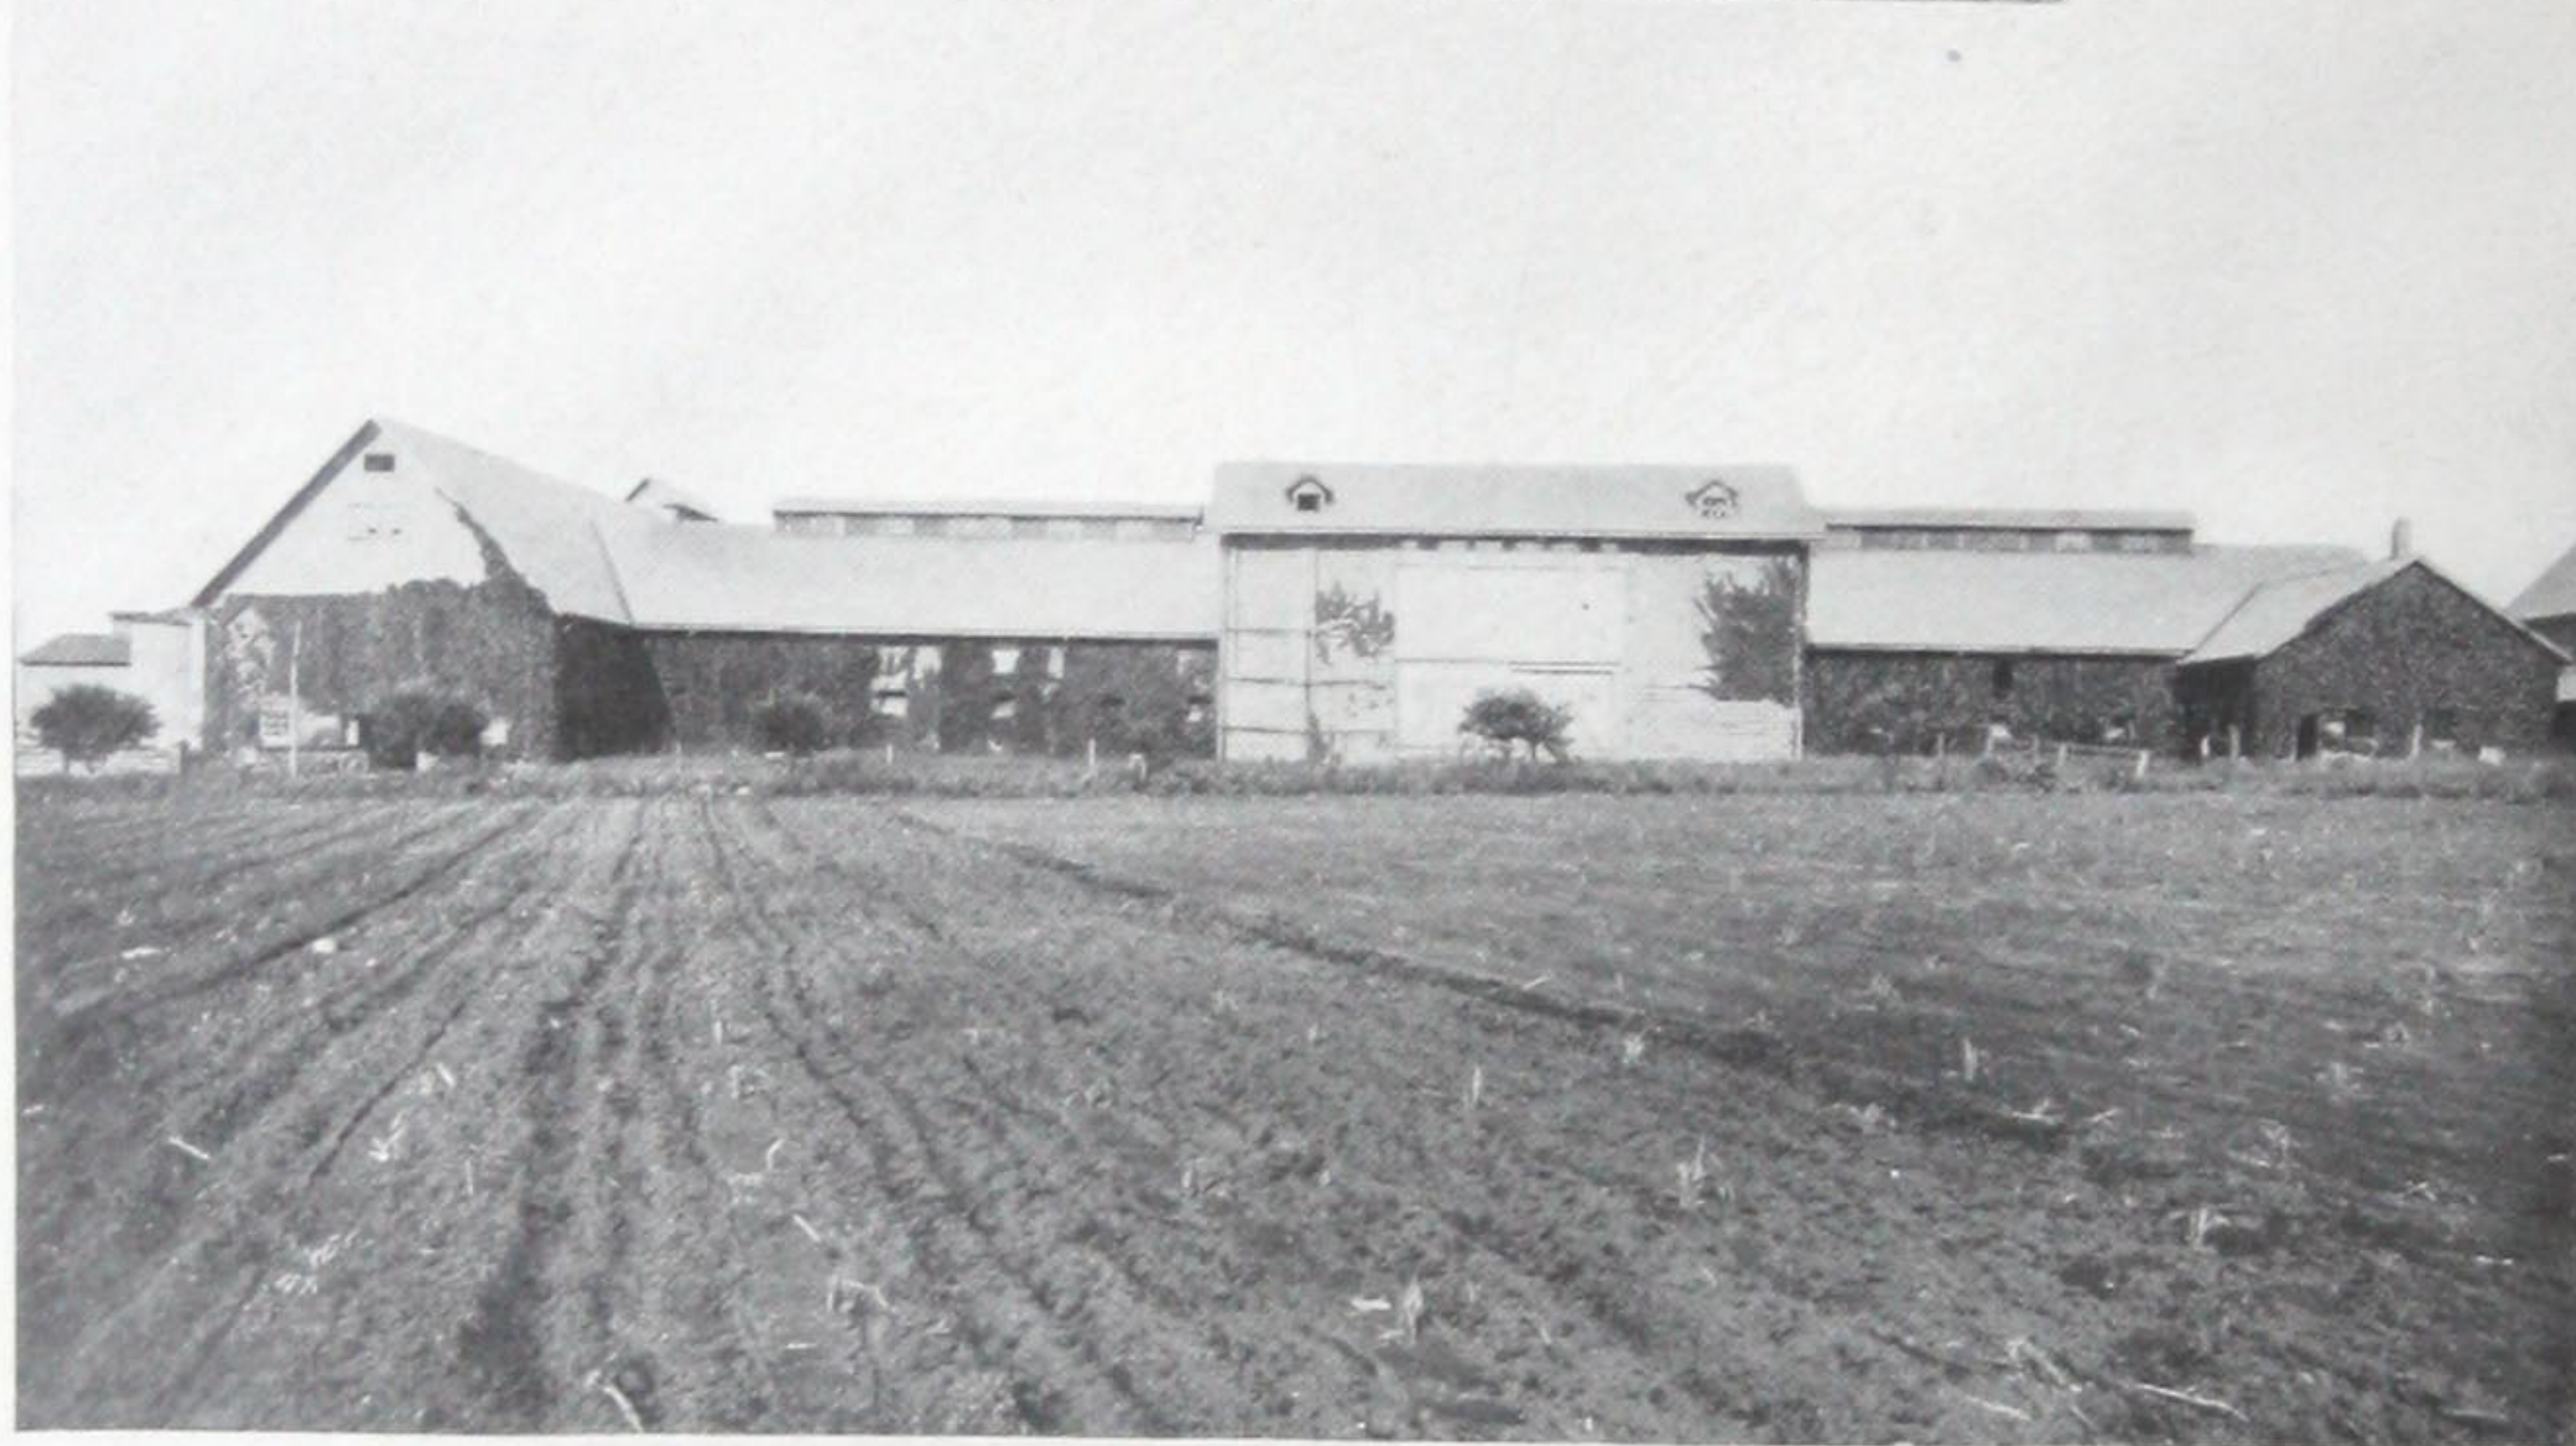

On March 22, 1916, the city of Paris, Texas, was all but wiped out. Nashville, Tennessee, saw 700 homes and other buildings go up in smoke the same day—and Augusta added the third fire for the day. The total loss was close to \$25,000,000—and in every instance the wood shingle made this terrific loss possible.

And the farm is located at a distance from cities and towns—away from fire fighting apparatus. Consequently the danger is far greater. In the city the fire companies are on the ground in a very few minutes. On the farm a much longer time is required to get any kind of assistance.

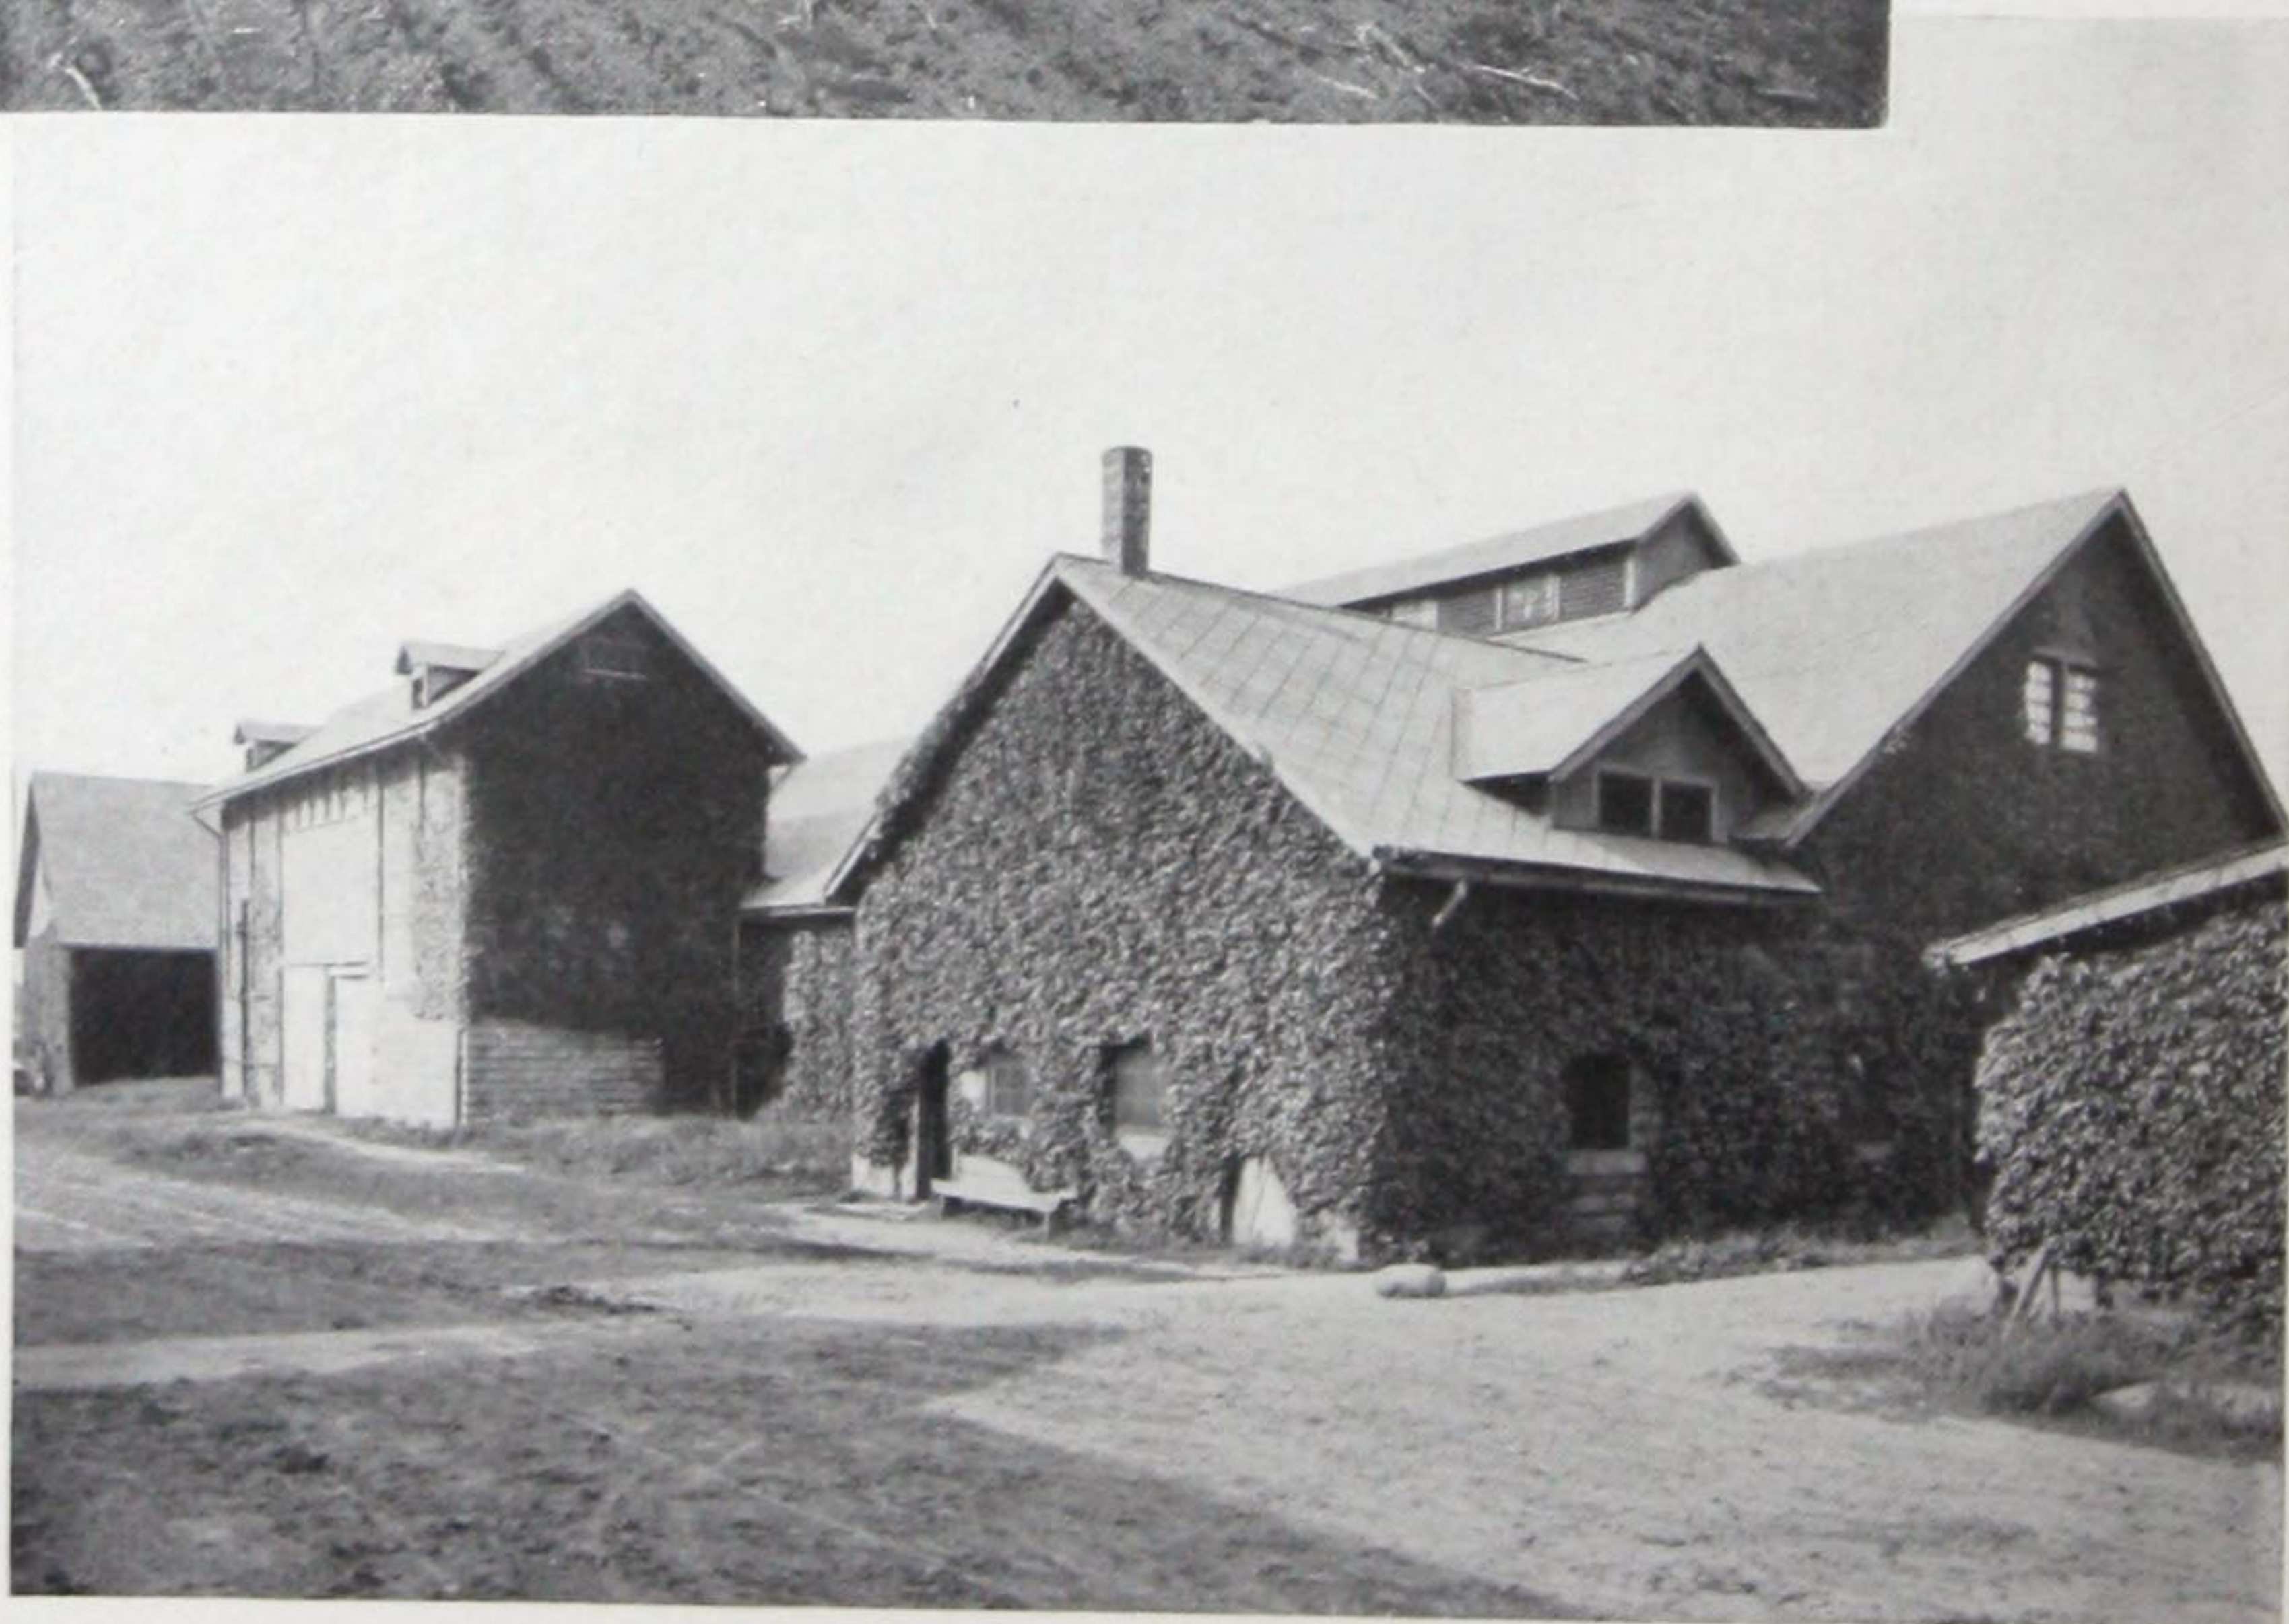

Main group of buildings on the Good Hold Farm, Mentor, Ohio. Horse barn in foreground. Driveway to office, creamery, cow barn, wagon shed, calf and feed barn, celery and hen house, farm implement shed, etc. All buildings covered with Ambler Asbestos Shingles (Century Brand)

Rear view of wagon shed and feed barn

Another view of buildings shown in center illustration

A roof fire is a bad fire and it is the most common sort of fire. Out of six hundred and ninety fires in Montgomery, Ala., three hundred and three started on wood shingle roofs—and the average is higher in the suburban and rural districts.

If FIRE PROTECTION is needed anywhere it is needed on the farm—and every farm owner owes it to himself and to his family to make his home SAFE against the possibility of FIRE. Certainly he cannot afford to take chances with wood shingles.

The wood shingle has left a trail of embers and disaster and lives wherever it has been used. With a true American "it-never-can-happen-to-us" feeling we have gone on building our roofs of kindling wood when we knew that they WOULD BURN—that sparks and flying embers would transform them into raging seas of flame in a minute or two.

Wood is not an imperishable material. It soon dries out and becomes as inflammable as excelsior or dry hay. Let the rain drench a wood shingle roof but once. The sun comes out—dries the shingles—drives out the moisture too quickly—and warping and splitting begins.

With each rain—with the winter freezes—with the spring thaws—frost—dew—with each—the warping goes on. It must, for it is the nature of wood to do these things and the moment the shingles begin to warp they become useless as a roof covering—for under the curls in the cracks and in the bare spaces where shingles have worked loose—the sparks find snug resting places—the rain finds entrance—the dampness rots the shingles and underneath—it takes more fuel to heat the house—and the roof is no protection against the scorching summer sun.

But What Roof Can I Trust?

The solution is simple and very likely some of your good neighbors have solved it for you.

Get a roof covering that CANNOT BURN or CARRY FIRE to other buildings. Then no matter how thick and fast the sparks and burning embers rain down upon it, you can rest secure that *your* roof is an absolutely dependable protection against FIRE. Your loved ones are SAFE.

Such a roof can be built with

Ambler Asbestos Shingles (Century Brand)

These shingles, made from cement and pure asbestos fibres, are practically indestructible. They give you the advantage of concrete construction with the additional fire protection assured by the asbestos fibres.

Panorama of Mr. Henry A. C. Taylor's Dairy Farm Buildings, Newport, R. I. Covered with Ambler Asbestos Shingles (Century Brand). Applied according to the American method

Ranch House: Property of Miller Brothers, 101 Ranch, Bliss, Okla. Covered with Ambler Asbestos Shingles (Century Brand)

Asbestos cannot burn. Neither can cement. Consequently a shingle made from these materials gives you more protection than you can get from any other form of roofing material.

They can't wear out. They never curl up—warp or split or dry out like wood. They never chip or shale off or work loose like slate. They never rust or blow off like tin. In fact an Ambler Asbestos Shingle Roof is a permanent roof. Weather can't hurt it. Extreme heat or extreme cold does not affect it one way or the other.

Nor does the wind get under and rip the shingles off. Ambler Asbestos Shingles (Century Brand) lie so close—so snug to each other and to the roof that the air cannot get under them. During the New Orleans Tornado of September 29th, 1915, Ambler Shingles distinguished themselves. With roofs going off all around Ambler Shingles held. We prepared a special book about that unusual storm. Shall we send you a copy?

And Ambler Asbestos Shingles become tougher and stronger as they grow older—they improve upon exposure to the weather. You never have to paint them. They don't require frequent or even occasional attention. Once you put them on your house you are roofed for life.

You need never paint them or patch them. They hold their original beauty and attractiveness as long as they last, and your roof always looks bright and fresh and new as a result. We know numerous roofs that have not had ten cents spent upon them in as many years.

These Claims are Quickly Proved

Not a single virtue of Ambler Asbestos Shingles has been over-estimated in this circular. Every statement can be proved. If you do not have an encyclopedia handy—write the editor of your farm journal. Ask him to tell you something about the endurance of concrete.

He'll tell you of buildings reared in forgotten ages of antiquity. The old buildings of ancient Greece and Rome were all built of concrete. Time—earth disturbances—wars have reduced many of them—but in all the thousands of years since they were built time lost the fight, and enough of the buildings stand to enable identification.

Asbestos has quite as long a history. It was used by the ancients as a “funeral cloth of kings.” Its fire resisting qualities were known by the ancient tribes of both Europe and Asia.

So your editor or encyclopedia will tell you that neither of these materials can burn. That the action of the atmosphere has no effect upon them—that heat or cold will not impair them—in fact that nothing short of deliberate destruction will injure them.

Cattle Arcade—Canadian National Exhibition Association, Exhibition Grounds, Toronto, Ont.
Buildings covered with Ambler Asbestos Shingles (Century Brand)

You Can Make Your House as Secure

You can make it FIRE tight—Wear and Weather and Time Proof.

You can add to the beauty of your home and buildings and KNOW that the beauty is going to last without the frequent necessity of patching and painting.

You can get a roof that will give added comfort—greater security for your loved ones—and a roof that will be a source of pride as long as you live.

You can get a roof that will cost you nothing from the day you put it on your house.

You can do all these things—at one time—at one final cost with Ambler Asbestos Shingles (Century Brand).

100,000 Others Have Done It

You will find Ambler Asbestos Shingles (Century Brand) on every style and type of building from the bungalows of lower California to the impressive mansions of Newport—up into Canada—down into the Tropics—to the West Coast of Africa—to Honolulu.

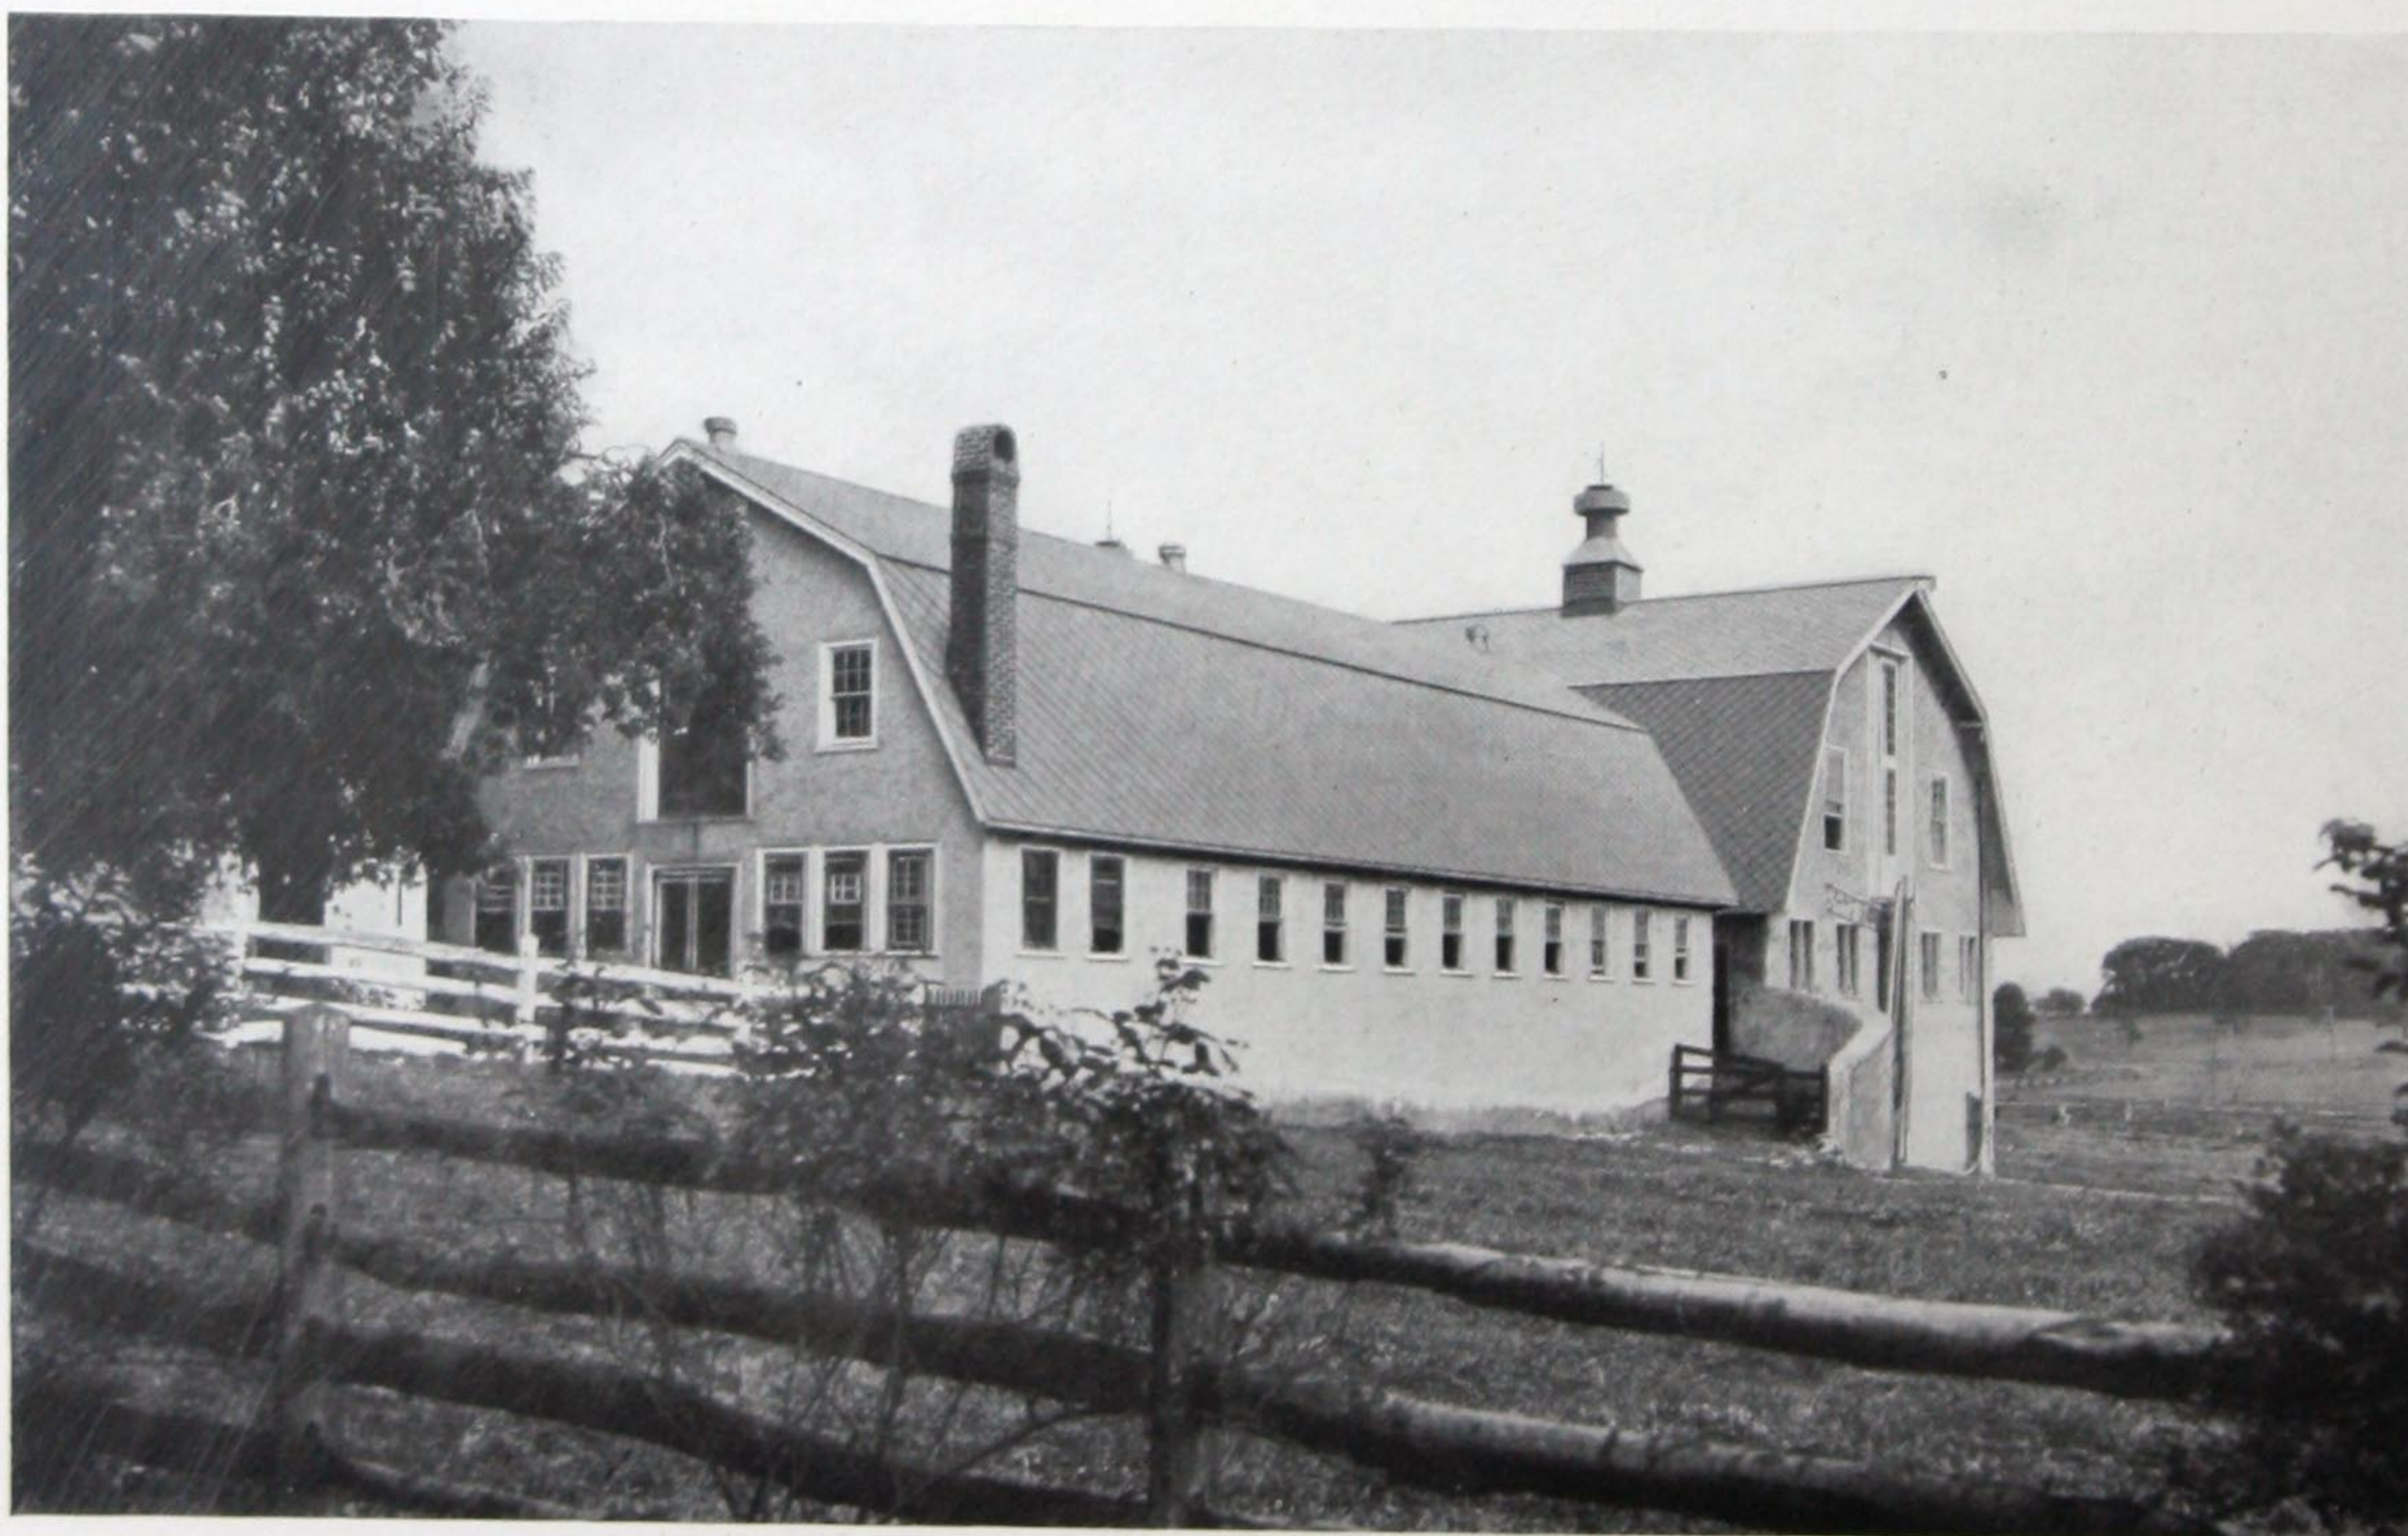

And the roof that is selected by the careful buyers of all climates—to meet every variety of weather—is certainly the one dependable roof for you.

SPARKS IGNITE THREE ROOFS

FIRE DEPARTMENT ANSWERS
TWO CALLS YESTERDAY, ONE
SATURDAY AFTERNOON

The fire department answered two calls yesterday morning. Saturday afternoon. All of them were due to sparks from falling shingle roofs, the principal cause of fires in Champaign.

At 10:01 yesterday morning a call was received from Miss Mary McDonnell, 405 West Springfield street. A spark from a falling shingle had started a fire on the roof, damaging the amount of about \$25.

At 11:40 the firemen were called to the home of Mrs. R. H. Bausch, 111 West Springfield street. A spark from a falling shingle had started a fire on the roof and the damage was about \$25.

The fire department was called at 3:45 Saturday afternoon to the home of Mrs. R. H. Bausch, 209 East city avenue. The alarm was a spark igniting the roof. The damage was slight and the fire was extinguished before the firemen arrived.

SPARKS CAUSE TWO SMALL ROOF FIRES

Wind Carries Sparks From Bonfire to
Roof of Barn and Causes
Blaze

Sparks caused two roof fires yesterday morning, the first at the home of T. E. Kell, police station, just off the station. Sparks from a bonfire on the roof of a barn caused a fire on the roof. The fire was extinguished before the firemen arrived.

SEES ROOF FIRE WHEN ON TRAIN

While leading Atlanta Piedmont avenue neighbor watching the parade at 6 o'clock Wednesday morning, the fire department discovered a fire on the roof of a house at No. 629 Piedmont, also on the train.

The fire spread to the double house at No. 629, owned by Mrs. H. Neely, manager of the Schlesinger Company. The fire spread to the double house at No. 629, owned by Mrs. H. Neely, manager of the Schlesinger Company.

Two Roof Fires.

Two roof fires enlivened the morning for firemen today. One was at the Johnson restaurant in Fourth St. and the other at the home of R. R. Smith 1351 Broadway street. Sparks from the chimney ignited the roof but were extinguished with small loss to the building.

Spark From Chimney Fanned By High Wind Carries Blaze.

From a Journal Correspondent
Perry, Mich., April 10.—
A fire broke out in the roof of the Johnson restaurant in Fourth St. and the other at the home of R. R. Smith 1351 Broadway street. Sparks from the chimney ignited the roof but were extinguished with small loss to the building.

SPARKS CAUSE A BARN ROOF FIRE

Christ Bausch of Ann
Street Has Loss Estimated
at \$75.00.

The fire department was called to the residence of Christ Bausch, 511 Ann street, this afternoon by a telephone alarm. The roof of a two-story frame house caught fire from the sparks of a falling shingle. The damage done to the structure is estimated at \$75.00.

SPARKS SET ROOF OF HOUSE ON FIRE

Loss of Fifty Thousand Dollars
Sustained in Blaze Yesterday Afternoon.

Yesterday afternoon the village of Ticonderoga suffered a fire of \$50,000 when the roof of a house was destroyed.

The fire originated from an imperfect fire destroyed a section of the roof in the rear of the rooming house at 203 Fairnam street this morning.

The fire was discovered by Mr. Neille, the proprietor, as she was preparing the morning meal and an alarm was given from the box at Twenty-third and Fairnam. The department arrived immediately and soon had the fire under control. The damage was estimated at \$50,000.

The real story of the inefficient roof is told every day in the newspapers. But the story of the roof that leaks—the roof that requires frequent patching and painting is told only in bills and disappointment.

The only solution is the selection of a roof that can neither burn or wear out and the only such roof we know is the roof built with Ambler Asbestos Shingles. Specify *that* roof and be sure.

ARISE TO FIND ROOF OF HOUSE IN FLAMES

Arising at 6:15 o'clock Wednesday morning, Roy Gilbert, residing at 100 Huestis avenue, discovered that a large portion of the roof of the residence was a mass of flames. A call was sent to the fire department and before the department arrived Mr. Gilbert with the assistance of neighbors had carried out nearly all the furniture on the first floor and part of the furnishings of the second floor. Sparks from the chimney caused the blaze.

The entire east side of the roof of the house was burned away and some damage was done in the garret. The loss was estimated at \$200. When the fire ladders arrived the situation looked dangerous and a line of hose was laid but was not used. Street car traffic and an interurban car were held up for the fire scare passed without disorder in any of the other branches of the institution.

The water pressure was low and the Lackawanna fire department could do little. An alarm was sent to headquarters in Buffalo and then a second. Chief McConnell and Assistant Chief Murphy responded with even engine and two truck companies. The fire was making considerable headway when the Buffalo companies arrived. It started at 11:45 o'clock in the morning and was not out until 3 o'clock in the afternoon. Father Baker estimated the loss at \$75,000. The loss is covered by insurance.

About 250 boys from five to twelve years old made their home in the burned building. They were in charge.

The newspaper clippings reproduced on this page are but a few of the many taken from papers every week in the year. They emphasize the number of fires communicated through combustible roofs. Protect your buildings with the best fire-proof roof—AMBLER ASBESTOS SHINGLES (Century Brand).

AMBLER ASBESTOS SHINGLES

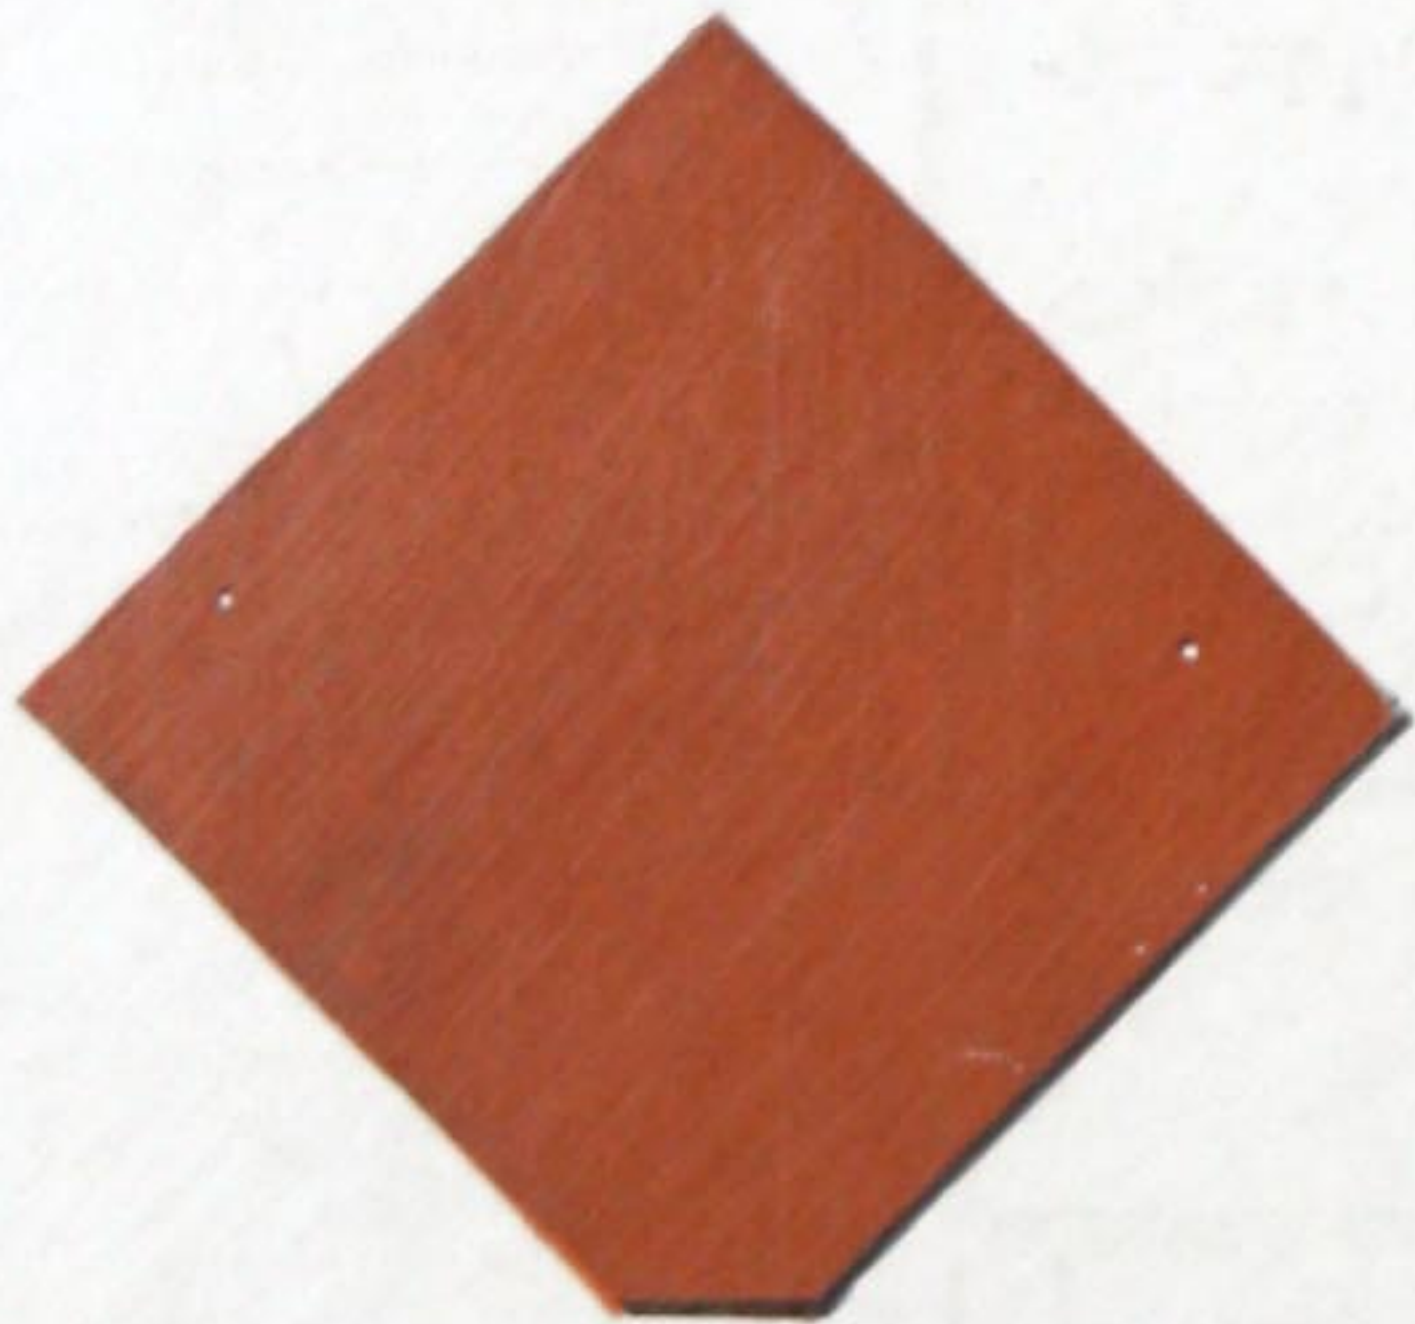

(CENTURY BRAND)

A physician's garage at Newport, R. I.

The roof and upper side walls of this garage were laid when the garage was built, eleven years ago. Since that time not a penny has been spent for either paint or repairs and the roof is just as tight and just as sound as it was the day it was laid. And all this in spite of the fact that it has been subjected to the most severe winter weather—the kind of freezes, snows, rains and winds that tear up the New England coast. Looking at the roof today one gets the impression that it cannot be more than a few months old. There are more than four hundred other garages and costly homes at Newport, R. I., covered with Ambler Asbestos Shingles (Century Brand).

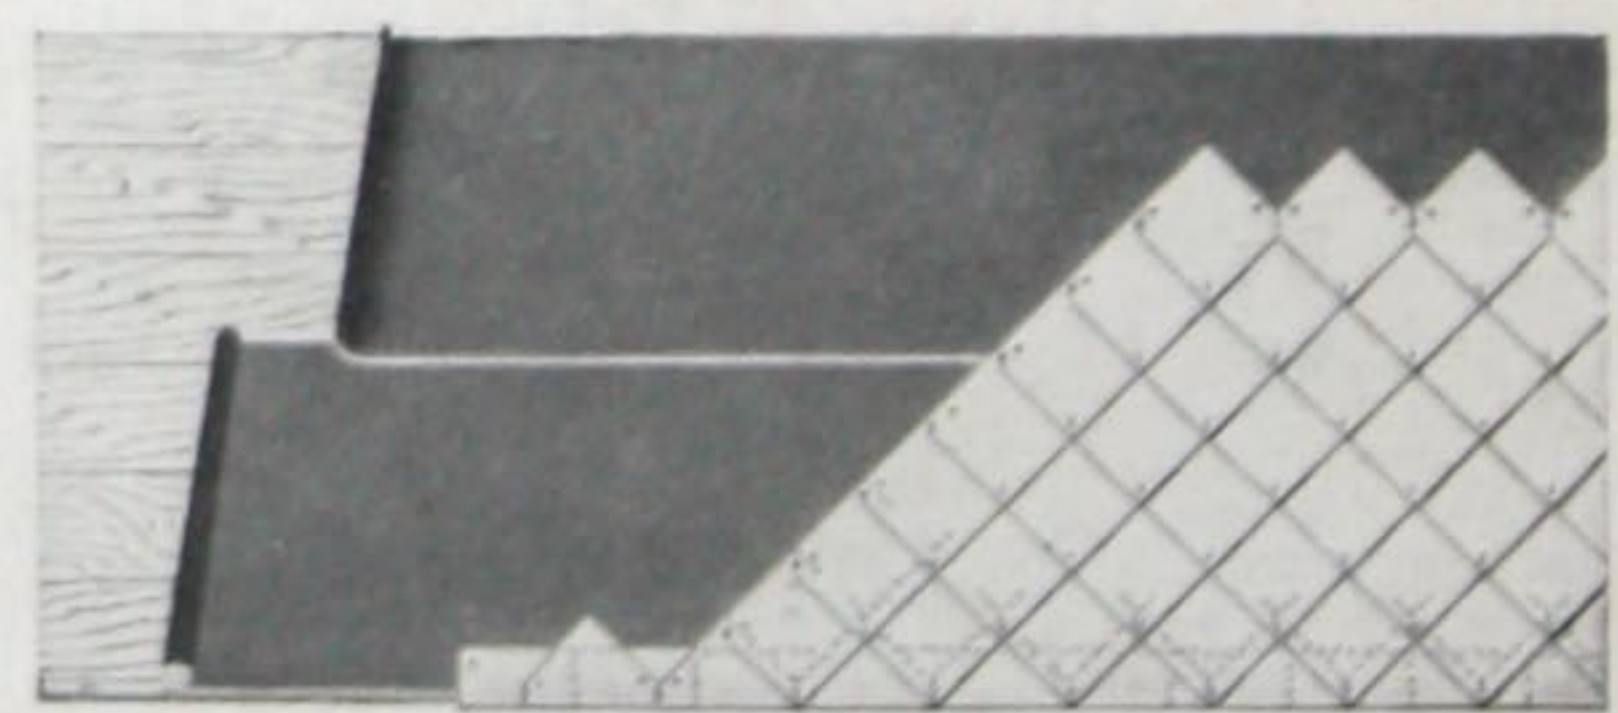

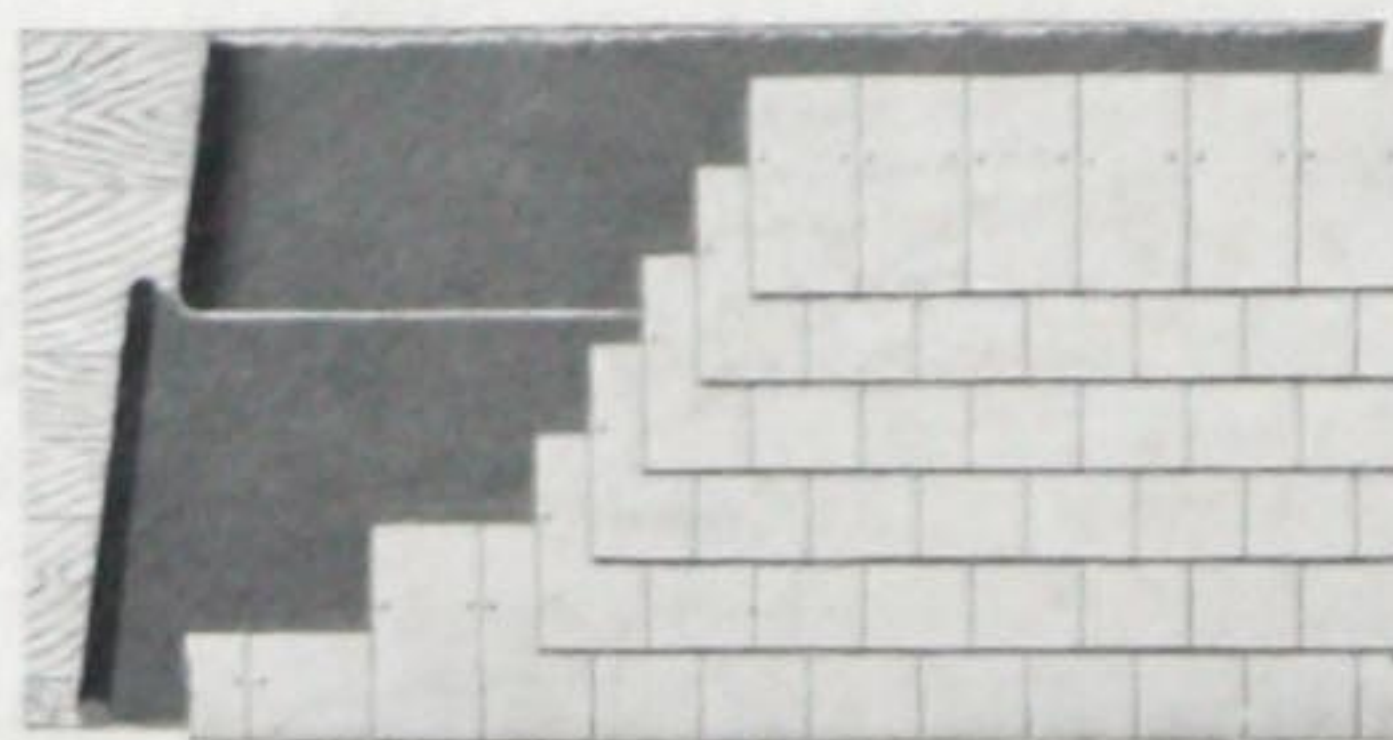

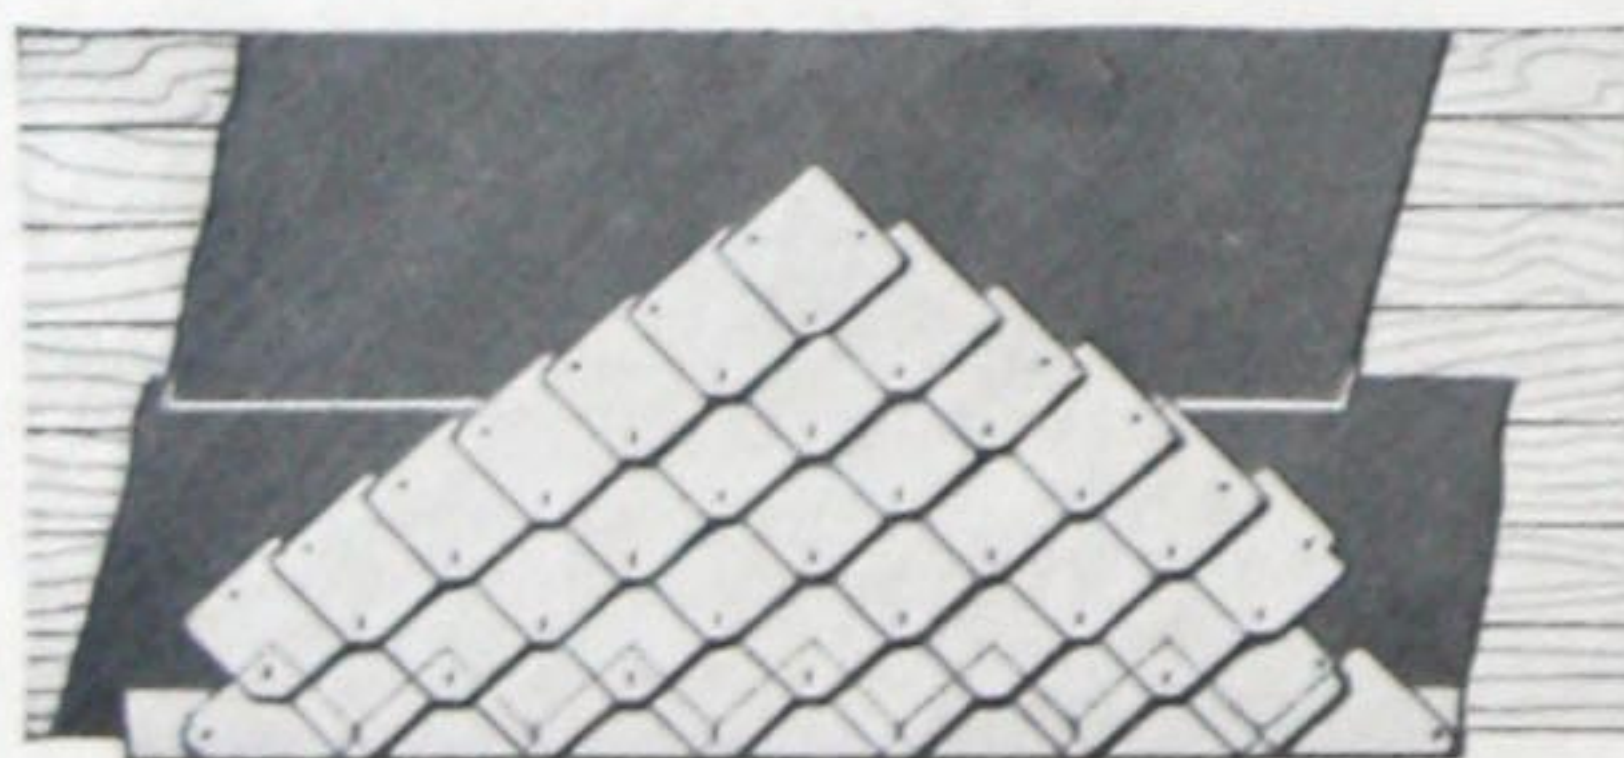

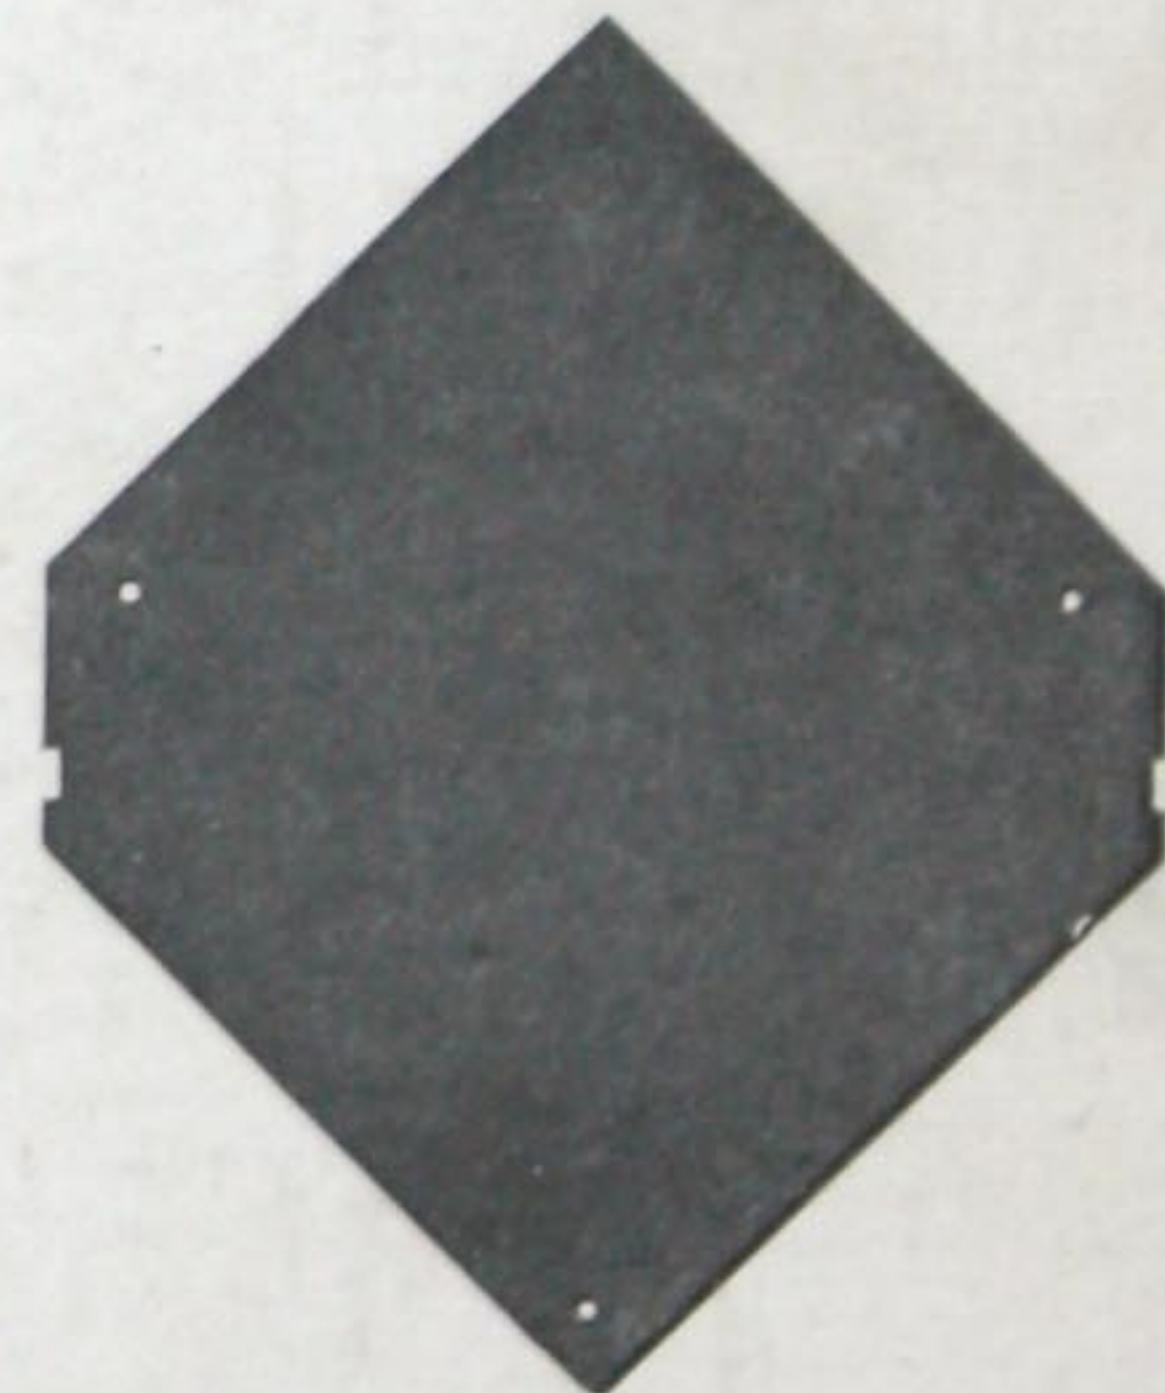

Indian Red

Newport Gray

Blue Black

The three striking colors in which Ambler Asbestos Shingles (Century Brand) are made—and the three popular methods of application—when combined, make possible a number of color and decorative effects. All styles made in the several colors.
